The process for developing an online unit

Use the questions below to guide your thinking about how you will develop your online unit.

- 1. Begin your course design with the unit Learning Outcomes:
- What are the intended learning outcomes of the course?
- Define the desired knowledge, skills and attitudes/disposition a student should demonstrate by the end of your unit.

2. Assessment Tasks

- What are the summative tasks that will assess the students learning?
- What formative tasks will help students assess their progress against LO's

3. Unit Structure

- What delivery structure best supports students learning of the content -
 - · weekly/modular,
 - instructor directed,
 - · student self-paced,
 - · multimedia instruction

5. Communication

- How should students communicate in ways that will support the learning helping them to construct their knowledge and engage with the content?
 - · Only with the lectuer
 - work with their peers?
 - Work in groups?
 - Discussion boards?

4. Content Type

- What content best supports the learning outcomes?
 - Lectures,
 - podcasts,
 - readings,
 - · a combination?
 - 6. Set up unit in Moodle. For each week/module identify:
 - Assessment of learning (formative/summative)
 - Content
 - instructional strategies
 - Communication

7. Completed Unit

 Review your unit - as you receive the completed student assesment tasks, evaluate whether the intended learning outcomes were met. If not go through this process again.

Diagram 1: The process for developing an online unit using backward design and constructive alignment principles

The process described above has been developed using a backward design approach (Wiggins & McTighe, 2005) and is based on the theory of Constructive Alignment (Biggs & Tang, 2007). The starting place for unit design is on what and how the student is to learn, rather than on what the teacher is to teach.

Backward design is the process of defining the intended learning outcomes of a unit, that is, the desired knowledge, skills, and attitudes/dispositions that students should develop/gain whilst engaging with the unit material, and then building the unit's content, instructional strategies and achievement tasks in ways that help the student achieve these learning outcomes (Fox & Doherty, 2012).

Constructive alignment is based on two constructs, *constructivism* – students using their own activity to construct their knowledge or other outcomes, and *alignment* in the design of teaching and learning activities and assessment tasks to meet the intended learning outcomes.
